What is it?

Autism spectrum disorder

Autism spectrum disorder, also known as autism, is a developmental disorder that affects how people communicate and interact with others.

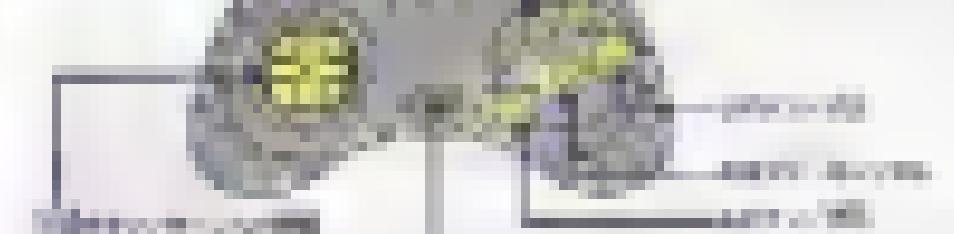

Individuals with autism may have difficulty communicating and interacting with others. They may have trouble understanding social cues, such as facial expressions and body language. They may also have trouble expressing their own thoughts and feelings. Some individuals with autism may have repetitive behaviors, such as hand-flapping or rocking back and forth. These behaviors can be caused by sensory sensitivities or difficulties with social interaction.

Using the history

Navigation

Navigation is the primary function of the history panel. It lets you quickly flip between different versions of your document.

Navigation is split into two sections: **Recent** and **History**.

Recent: Shows a list of recent documents that you've worked on. You can click on any document to open it again.

Timeline view

The timeline view is a visual representation of your document's history. It shows a series of colored rectangles representing different changes made to the document over time. Each rectangle contains a timestamp and a brief description of the change.

Timeline details

When you click on a specific change in the timeline, a detailed view of that change is displayed. This view includes the timestamp, a preview of the change, and a list of the changes made.

Editing

Editing is a feature that allows you to make changes to your document's history. It lets you add, remove, or modify changes in the timeline.
